Benefits of Testing Why Test Kits?

Test kits can be a contractor's best friend out in the field. It's often very difficult to identify stains merely on appearance alone. For instance, efflorescence, hard water stains, white scum and integral water repellent blushes all have a very similar appearance. Even the experts won't always be able to tell you by looking what you are dealing with.

As a cleaning professional, you face many different challenges out in the field. Some have simple solutions, yet some do not. When you're faced with a problem that you can't seem to find the answer for, look no further than an EaCo Chem testing kit.

Test kits come with a variety of pint or quart size samples designed for specific testing. For example, the Complete Cure Test Kit comes with five different pint size bottles, all designed to remove white stains from masonry walls. These are the most common issues that arise during phone conversations and can be the most difficult to identify.

Having test kits with you at all times allows you to:

- Invest a little money to find a solution, quickly.
- Show your customer that you can handle their issues
- Give you peace of mind that you will not be stuck facing problems without the right tools.
- Do what your competition can't!

Tradesmen don't always know the situation before getting to the job site.

A carpenters, masons, electricians... keep a variety of tools to be prepared when at the job site. Cleaning contractors also have a variety of tools. So why not have a variety of test kits to be prepared. Solve the cleaning issue before the competition.

Remember, you can never have enough essential tools!

List of kits:

Complete Cure (white deposits)

Restoration: Brick and Stone

Paint Removal

House & Deck

Glass & Anodized Aluminum
